

Get the Dirt on Your Soil

It's a waste of money to apply fertilizer to your lawn if it doesn't need it. The only way to know how much fertilizer your lawn needs is to have your soil tested.

An inexpensive \$10 soil test is available at your county MSU Extension office. The results will tell you how much nitrogen and phosphorus your soil has and just how much fertilizer to apply.

Over application of fertilizer is a significant source of pollution to water. Use the proper amount of fertilizer to keep your lawn green and the water clean.

Ready for a rainy day?
